What is Buchikiri?

Buchikiri

No shutdown needed.
Just unplug it. It's done.

Buchikiri in the Workplace

Buchikiri is a function that safely turns off a Windows PC without shutting down. This feature is only available on Interface computers.

With the **Buchikiri** function, you can safely turn off hundreds of Windows PCs by just turning off the breaker in your workplace. When the breaker is turned back on, the computers will automatically reboot.

- **Long-term Stable Supply**
- The best solutions to replace your PCs

Interface manufactures several hundred different types of interface modules; this gives you the ability to customize our standard products to your specific requirements. Unlike other manufacturers, we also offer small to mid-volume, high-mix model productions. We can meet the need for small quantity prototypes and early stage test run products. We are here to help you find products that will fit the specifications for your applications. [Contact us today.](#)
